28 Service Schedules

28.1 Service Schedule Overview

CommSol Holdings (CSH) is a wholesale only provider of open-access high-speed communications across the ACT and Surrounds. CommSol Holdings broadband network provides connection speeds from 12Mbps/1Mbps up to 10 Gbps.

Retail Services Providers (RSPs) have a choice of connection methods, a range of service levels and connection speeds. All services are available as Layer 2 bit-stream 802.1q tagged, Layer 2 Aggregated L2TP or Layer 3 Virtual ISP (VISP).

28.2 About our Services

CommSol Holdings works with building owners and property developers to deliver compliant communication solutions, with speeds of at least 25Mbps. CommSol Holdings uses a range of technologies, including Passive Optical, Active Optical, VDSL2, G. FAST, Wireless and other new technologies to deliver services.

*CommSol does **not** provide facilities for Analog Voice circuits.*

RSPs who connect to our network using Layer 2 options must purchase an Ethernet Virtual Circuit (EVC) and a POI Connection Circuit (PCC). RSPs who connect to our network using Layer 3 must purchase an Ethernet Virtual Circuit (EVC), IP Address (IP) and a data pack.

28.3 Connecting to our Network

CommSol Holdings broadband network will deliver services at our Central Aggregation Points of Interconnect. RSPs have the option of connecting to one or more points of interconnect at a range of speeds from 50Mbps (first 50Mbps free) to 10Gbps via Optical Ethernet. In some developments and sites, and for some developments RSPs may also connect directly at a building aggregation site, allowing for extra flexibility in delivery of services and the use of a RSPs own backhaul.

Services are delivered as Q-in-Q tagged VLANs or Aggregated L2TP sessions.

28.4 802.1q &/or 802.1ad (QinQ) Delivery

When an Ethernet bit stream service is delivered to a CSH POI (NNI) interface the service is identified by a combination the inner 802.1Q header (CVID) and outer 802.1Q header (SVID). At present the SVID is a serially incrementing number starting at 2 that is used to group services together, SVID is not utilised by default.

Preamble								SFD	Destination MAC						Source MAC						802.1Q Header				802.1Q Header				EtherType/Size	Payload																CRC / FCS			
1	2	3	4	5	6	7	8	9	1	2	3	4	5	6	1	2	3	4	5	6	1	2	3	4	1	2	3	4	1	2	1	n	1	2	3	4											

28.5 L2TP/PPP Delivery

RSP POI interfaces have the option of having customer circuits delivered via L2TP/PPP. When this option is selected an RSP has a VLAN ID and interconnect IP address assigned. CSH then delivers customer PPP over L2TP sessions to a RSPs desired termination address(s).

An example PPP over L2TP packet

28.6 Service Speeds

As a guide, CommSol Holdings aims to deliver the following service speeds to each site. The speeds available may vary per-site and/or per/technology available at each site.

Fixed Line Residential	Fixed Line Business	Wireless Residential	Wireless Business
1/1 Mbps	1/1 Mbps	1/1 Mbps	1/1 Mbps
12/1 Mbps	10/10 Mbps	12/1 Mbps	10/10 Mbps
25/10 Mbps	20/20 Mbps	25/10 Mbps	20/20 Mbps
50/20 Mbps	50/50 Mbps	50/20 Mbps	50/50 Mbps
100/40 Mbps	100/100 Mbps		100/100 Mbps
250/100 Mbps	500/500 Mbps		500/500 Mbps
500/250 Mbps	1 Gbps/1 Gbps		1 Gbps/1 Gbps
1000/400 Mbps	5 Gbps/5 Gbps		2 Gbps/2 Gbps
	10 Gbps/10 Gbps		4 Gbps/4 Gbps

In each case the service speeds will be delivered as per the designated upstream and downstream bandwidth at the customer site as a **policed** interface, where the bandwidth will be delivered as

$$1024 \text{ Kilobits} * \text{Allocated Capacity in Megabits per second}$$

CommSol Holdings will not perform any shaping of layer 2 services, and the responsibility for any shaping remains with the RSP or Customer equipment.

28.7 Traffic Classes

CommSol Holdings initially offers 2 traffic classes throughout our network. These two classes (TC-1, TC-4) are designed to allow RSPs to deliver both latency and loss sensitive applications and standard data services to their clients.

28.8 TC-1 – CIR

Our TC-1 traffic class is suited for the deliver of real-time voice or media applications that require a guaranteed constant speed and delivery. CIR bandwidth is purchased from the RSPs POI to a premise and are used to deliver guaranteed bandwidth availability to the customer nominated port.

28.9 TC-4 – CIR from NTU to BAP, PIR to POI

TC-4 bandwidth offers a Peak Information Rate at the building connection point (where available) or a Peak Information rate at the state-based connection point. A maximum contention ratio of 1:50 is maintained for delivery of services for TC-4 class from the building to the state-based aggregation point. TC-4 bandwidth is considered the most cost-effective method for general internet services.

28.10 Layer 3 services (VISP)

RSPs who wish CommSol to aggregate their ISP services may sign up as a Virtual ISP with CommSol Holdings. In these cases, CommSol Holdings will deliver Layer 3 Internet-Only services as a PPPoE service to the RSPs clients.

RSPs who wish to operate as a Layer 3 provider may either use a CommSol Holdings hosted RADIUS service, or operate their own RADIUS service. VISPs who wish to purchase Layer 3 services must either purchase AVC and add an appropriate layer 3 data pack or shared IP Transit feed on top of the service.

CommSol Holdings will supply (charged item) a maximum of 1 IPv4 address per service, up to a maximum of 25 IP addresses per RSP. Customers who wish to allocate more IP addresses will be required to obtain their own IP address space from APNIC. The minimum address space that can be assigned to CommSol Holdings for VISPs is a /24 (255 IP addresses) and will be BGP Advertised from AS63953, These addresses can be used for any CommSol service(s).

Once a customer has exceeded their data allowance, their service delivery will be modified to a pre-determined shape profile. RSPs who are using our Layer 3 services to deliver VoIP services may nominate up to 10 IP addresses which will be given priority delivery of traffic once the shaping profile is applied, up to a maximum of 1Mbps.

28.11 IPv6 Support

CommSol Holdings supports IPv6 for all services. Customers may optionally request that their own /48 be utilised for their Layer 3 customers.

28.12 Service Assurance

Residential services are delivered as best-effort services. Business services can be purchased with either best-effort, bronze, silver or gold service levels.

Service level	Fault repair time	Class Name
SL0 (BE)	within 7-10 business days	Zero/None
SL12	next-business day	Bronze
SL8	8 hour fault repair target	Silver
SL4	4 hour fault repair target	Gold
SL2	2 hour fault repair target	Platinum

28.13 Service CHURN

CommSol will support CHURN between RSP's, however at this stage this is a manual process, a processing fee of \$55 ex. GST applies per CHURN request, A churn will be completed and both parties notified, no authorisation is required by the losing party.

28.14 Ordering

End-User Services can be ordered from the CommSol Holdings Business to Business Interface (B2B) and/or WAPI (Wholesale API), RSP's must have completed the appropriate service contracts prior to placing an order and have an established POI or VISP service.

28.15 Fault Management

RSPs are responsible for the management of all faults. Customers are required to contact their RSP initially, and the RSP must assess and diagnose the fault before lodging with CommSol Holdings.

Faults are lodged using the CommSol Holdings Business to Business Interface (B2BI) and/or WAPI (Wholesale API). Faults for Silver and Gold service levels must be lodged through the gateway and then confirmed by phone.

Prior to lodging faults, a reseller must ensure that all customer equipment has been checked. If the fault is determined to be within the customer network a no-fault-found (NFF) fee and/or Fee For Service (FFS) may be charged.
